

Walkthrough frames

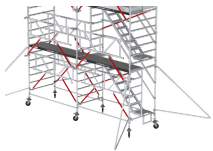

✓ Professional use

- Available in two sizes (0.75 and 1.35 metres)
- Suitable for the MiTOWER and RS5
- Available in a narrow and wide version

Walkthrough frames for Altrex towers. Prevents going up and down the tower needlessly.

You move safely from one tower to another, which are connected to each other, using the Altrex walkthrough frame. You walk easily from one tower to the other via the opening in the centre of the side of the frame. The walkthrough frame can also be placed at the bottom of the tower and serve as a passageway for accessing the tower. In case of a single tower – in particular in case of the RS TOWER 53 – this is used frequently. A basic walkthrough frame is also ideal if the tower has to be erected on a narrow sidewalk, allowing pedestrians to pass easily.

Passage

A passageway can be created at the façade side and the street side. That way, you make an unimpeded passageway for pedestrians on the sidewalk.

Available in different sizes

Altrex walkthrough frames come in a wide and narrow version in order to create a safe and fitting passageway.

Lightweight aluminium

The walkthrough frames are made from lightweight aluminium, enabling quick and easy mounting and dismantling.
