

Triangular stabilisers

✓ Professional use

- Suitable for the MiTOWER, MiTOWER PLUS, RS4 and RS
- Telescopic adjustable (RS5 and MiTOWER)
- Easy-Lock® system (RS5 and MiTOWER)

Altrex triangular stabiliser: Always safe at extreme heights

You erect your tower firmly on the ground using Altrex triangular stabilisers. That way, you will always stand safely at extreme heights. In case of a freestanding tower, you must use four triangular stabilisers. If the tower is attached to the façade, two triangular stabilisers are sufficient. The triangular stabilisers of the MiTOWER and RS TOWER 5 series of Altrex can be mounted quickly and are telescopic adjustable thanks to the patented Easy-Lock® system. In addition, they have a sticker with a signal function. This ensures additional safety. The triangular stabilisers of the RS TOWER 4 series are also adjustable.

Easy-Lock® system

The RS TOWER 5 and MiTOWER stabilisers have Easy-Lock®. Thanks to this patented Easy-Lock® system, the triangular stabiliser can be mounted quickly and is telescopic adjustable.

Necessity

In case of a freestanding tower, you must use four triangular stabilisers. If the tower is attached to the façade, two triangular stabilisers are sufficient.

Signal function

The triangular stabilisers have a sticker with a signal function. This ensures additional safety.
