

Double guardrail brace

✓ Professional use

- Continuous protection thanks to automatic claw connection
- Mainly used for the MiTOWER and MiTOWER PLUS
- Sturdy protection bumper for additional sturdiness

Altrex double guardrail braces: Always safe at extreme heights

Using Altrex double guardrail braces ensures that you will always stand safely at extreme heights. The double guardrail braces are used mainly for the MiTOWER and MiTOWER PLUS. The braces are designed in such a way that they include a claw & brace-pipe connection. Thanks to this connection, the brace-pipes are stronger and extra safe. A coloured pawl in the claw and the Altrex coding system on the brace-pipes indicate the length of the tower and its application.

Squeezed claw & brace-pipe connection

Altrex double guardrail braces are designed in such a way that they include a claw & brace-pipe connection. Thanks to this connection, the brace-pipes are stronger and extra safe.

Automatic claw connection

The automatic claw connection of the braces ensures a continuous attachment.

Sturdy protection bumper

The sturdy protection bumper guarantees the firmness of the claws. This protection bumper ensures that the claw is always secured. The result is that the claw can take some knocks and that dirt is not a problem.
