

## Toe boards

### ✓ Professional use

- Available in two widths (0.75 and 1.35 metres)
- Suitable for the MiTOWER, MiTOWER PLUS, RS4 and RS5
- Available in aluminium and wood

## Altrex toe boards for towers: All types and sizes available

The Altrex toe board is a raised edge and it must be used on each platform on which work is done. The toe boards ensure that material cannot fall off the platforms. The toe boards are mounted by means of toe-board holders. The result is that the toe boards can also be connected between double towers or they can be unfolded on the platform concerned. Altrex toe boards are available in wood (for the RS4) and aluminium (for the MiTOWER and RS5).

### Safety first

By using the handy toe boards of Altrex, you always ensure your own safety and the safety of other people. Using the toe boards, you are sure that materials never fall off your tower.

### Aluminium toe boards

Altrex always guarantees excellent quality. For example, the weight of the aluminium toe-board set is lighter and has a longer lifespan than the standard wooden set.

### Available in various widths

The toe boards are available in different widths. The available widths are 0.75 and 1.35 metres. That way, you always have a suitable set of toe boards for your rolling tower.
